Features That Make **Anuta ATOM** The Best Network Compliance Solution

Easy To Use Policy Builder Interface

Define complex policies with an easy and intuitive interface. Use string or python-jinja templates to define baseline configuration and remediation actions on violations.

Rich Multi-Vendor & Multi-Domain Support

Atom supports thousands of devices across 45+ vendors and can communicate over CLI, API, Yang or Netconf. Now it's easy to enforce compliance on your entire network

In-Depth Analytics

Compliance dashboard presents you with all the essential information. View compliance summary and observe the past trends to make better business decisions

Automated Network Audit and Remediation

Schedule and run a network audit at a time and frequency of your choosing. Get alerted on violations, preview the suggested fixes and enforce automated remediation.

Custom Report Generation

Generate custom reports specific to your network and business needs. ATOM platform enables you to focus on KPI of your interest.

"ATOM's compliance feature is like the intelligent capabilities of modern cars where even if you forget to turn off the headlights, the car will turn it off thereby avoiding draining of the battery"
